

Antimicrobial Use and Stewardship (AUS)

Dairy Sustainability Summit

Edie Marshall, DVM, MPVM, DACVPM

Wh

Got AUS?

This Photo b

Remember SB27 from 2015?

- Put **additional restrictions on antimicrobial use** in California starting in 2018, beyond national regulations in effect at the time
- Highly contentious!
- This topic – *antibiotic resistance* – is here to stay...

**Got
AUS?**

AUS mandates under the law

- Coordinate, don't duplicate

AUS collaboration with federal efforts

NAHMS 2019 Goat Study

- Collaborated with USDA National Agriculture Statistics Service (NASS) and USDA National Animal Health Monitoring System (NAHMS) to expand the 2019 Goat Study in CA
- Gathered information on the goat industry:
- Nearly 50 field staff from CDFA Animal Health Branch and USDA Veterinary Services from across the state collaborated to complete on-farm visits
- NAHMS analyzed their data
 - National-level information was published by NAHMS
 - State-level Information was shared with AUS as appropriate

NAHMS Feedlot 2021 & NAHMS Sheep 2024

CA-specific results from Goat Study 2019

USDA NAHMS 2019 Goat Study: Veterinarian Use

In the USDA NAHMS Goat study, **56.2%** of California goat operations consulted a veterinarian for any reason related to goat health, productivity, or management in the 12 months prior to survey administration. Details of these results include:

Veterinarian use by operation size

43.5% of small operations (5 - 19 head)

66.7% of medium operations (20 - 99 head)

70.4% of large operations (100 head or more)

Veterinarian use by primary production of the operation

60.5% of meat goat operations

55.0% of dairy goat operations

48.4% of "other" goat operations

USDA NAHMS 2019 Goat Study: Antibiotic Use

In the USDA NAHMS 2019 Goat study, **36.1%** of California goat producers reported **not** using antibiotics during the 12 months prior to survey administration.

Producers that reported **not** using antibiotics by operation size

48.0% of small operations (5 - 19 head)

25.3% of medium operations (20 - 99 head)

29.5% of large operations (100 head or more)

Producers that reported **not** using antibiotics by primary production of the operation

37.1% of meat goat operations

43.7% of dairy goat operations

26.6% of "other" goat operations

NARMS reports – NEW! Unprecedented!

**Heat Map of Non-Wild-Type
Difference in *Campylobacter*
NARMS Cecal Isolates
Cattle Slaughtered in
California vs. US NARMS Data
(excluding CA), 2019-2023**

AUS mandates under the law

- Coordinate, don't duplicate ✓
- Develop a **surveillance** (monitoring) program to collect data on:

Use of medically important antimicrobial drugs (MIADs)

Animal management practices and health outcomes

Trends in antimicrobial resistance

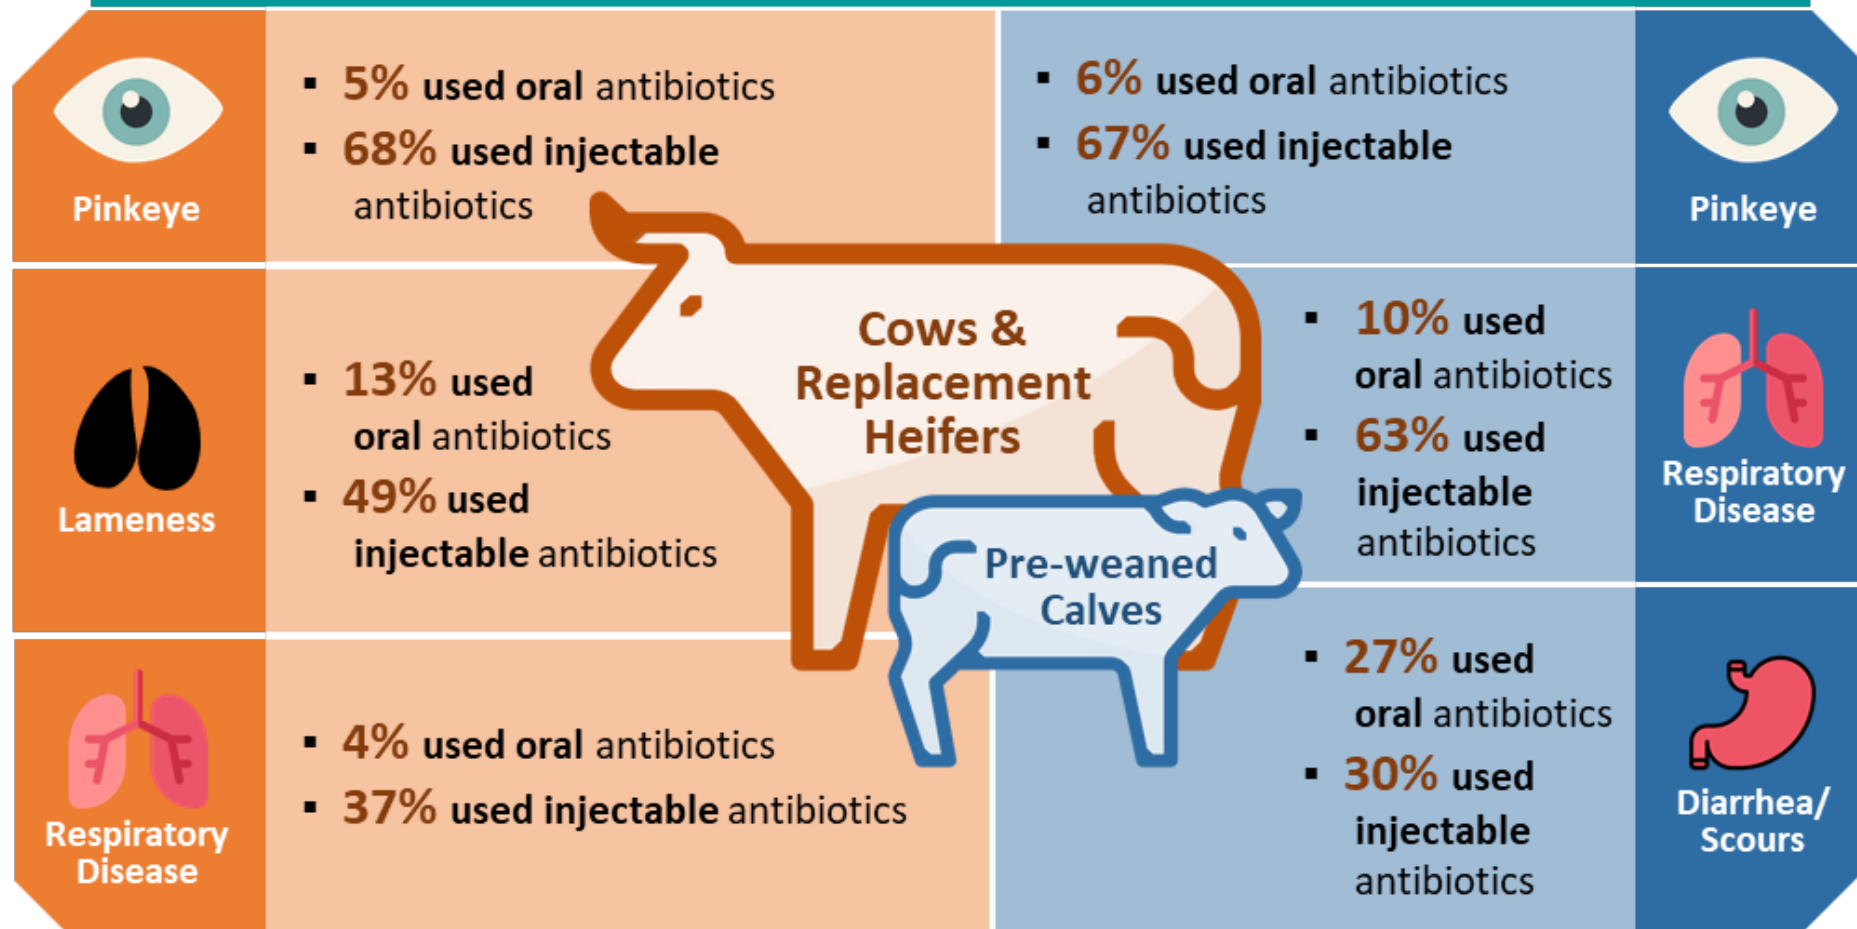

Sales of medically important antimicrobial drugs

Oral and/or injectable antibiotic use – Cow-calf (2017 survey)

Top 3 Reasons for Antibiotic Use

Among farms who reported oral and/or injectable treatment

Smaller herds were less likely to use antibiotics for the top reasons above

Cow-calf and Sheep Fact Sheets

AUS FACT SHEETS
2017 COW CALF SURVEY

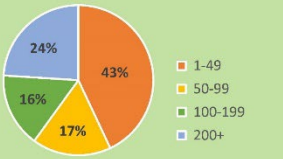

Antimicrobial Use and Stewardship | www.cdffa.ca.gov/ahfss/aus

ANTIBIOTIC USE AND STEWARDSHIP ON CALIFORNIA'S COW CALF OPERATIONS

In fall 2017, the California Department of Food and Agriculture (CDFA) Antimicrobial Use and Stewardship (AUS) program conducted an anonymous, mail out survey of cow calf producers across the state.
The AUS 2017 Cow Calf Survey requested information for calendar year 2016, prior to changes in state and federal antibiotic use laws.

AUS received responses from cow calf producers across 95% of California's counties

Surveys by Herd Size

- 1-49
- 50-99
- 100-199
- 200+

AUS received responses from **937** operations across California

180,690 total cattle reported, representing **12%** of the beef cattle in California (NASS 2017 Census)

Most cow calf producers were using a vet in 2016*

58% of survey respondents reported using a vet for any reason in 2016

21% of survey respondents indicated veterinary involvement in antibiotic use decision-making

Larger herd sizes were more likely to have used a veterinarian

*Starting in 2018, California law requires veterinary oversight of all antibiotic use

- One-page fact sheets
- Highlight findings from AUS' Cow Calf and Commercial Sheep surveys
- English + Spanish

HOJAS DE DATOS DE AUS
ENCUESTA DE OVEJAS COMERCIALES 2018

Uso y Administración de Antimicrobianos | www.cdffa.ca.gov/ahfss/aus

USO Y ADMINISTRACIÓN DE ANTIBIÓTICOS EN LAS OPERACIONES DE OVEJAS EN CALIFORNIA

En verano de 2018, el programa de Uso y Administración de Antimicrobianos (AUS, por sus siglas en inglés) del Departamento de Alimentos y Agricultura de California (CDFA, por sus siglas en inglés) realizó una encuesta anónima por correo a productores de ovejas comerciales de todo el estado.
La Encuesta de Ovejas Comerciales 2018 de AUS solicitaba información del año calendario 2017, antes de los cambios en las leyes estatales de uso de antibióticos.

AUS recibió respuestas de más de tres cuartos de los condados productores de ovejas en California

Encuestas por Tamaño de Rebaño

- Pequeño (1-99)
- Medio (100-499)
- Grande (500 o más)

AUS recibió respuestas de **108** operaciones de toda California

Se informaron, en total, **110,715** ovejas, lo que representa **el 23%** de las ovejas en California (Censo 2017 de NASS)

<6% Menos del **6%** de los rebaños pasó tiempo fuera del estado

La mayoría de los productores de ovejas estaban usando un veterinario en 2017*

El 59% de todos los encuestados indicó que usó un veterinario por cualquier motivo en 2017

El 35% de los encuestados indicó la participación de un veterinario en la toma de decisiones sobre el uso de antibióticos

Las probabilidades de que se usara un veterinario fueron **similares** para todos los tamaños de rebaño

*A partir de 2018, la legislación de California exige la supervisión de todo el uso de antibióticos por parte de un veterinario

AUS Annual VFD Report

AUS is the first program to **span two CDFA divisions**: the **Inspection Services Division (ISD)**, which handles regulation, inspection, compliance, and enforcement; and the **Animal Health and Food Safety Services Division (AHFSS)**, which focuses on stewardship, surveys and studies, judicious use, and best on-farm practices.

The divisions work cooperatively to promote public health and welfare via a safe and stable food supply for California.

FOOD & AGRICULTURE

2024 Veterinary Feed
Directive Summary
Report

Weaned dairy heifers

Depenbrock, et al. "In-vitro antibiotic resistance phenotypes of respiratory and enteric bacterial isolates from weaned dairy heifers in California." 2021. PLoS ONE: 16(11): e0260292. <https://doi.org/10.1371/journal.pone.0260292>

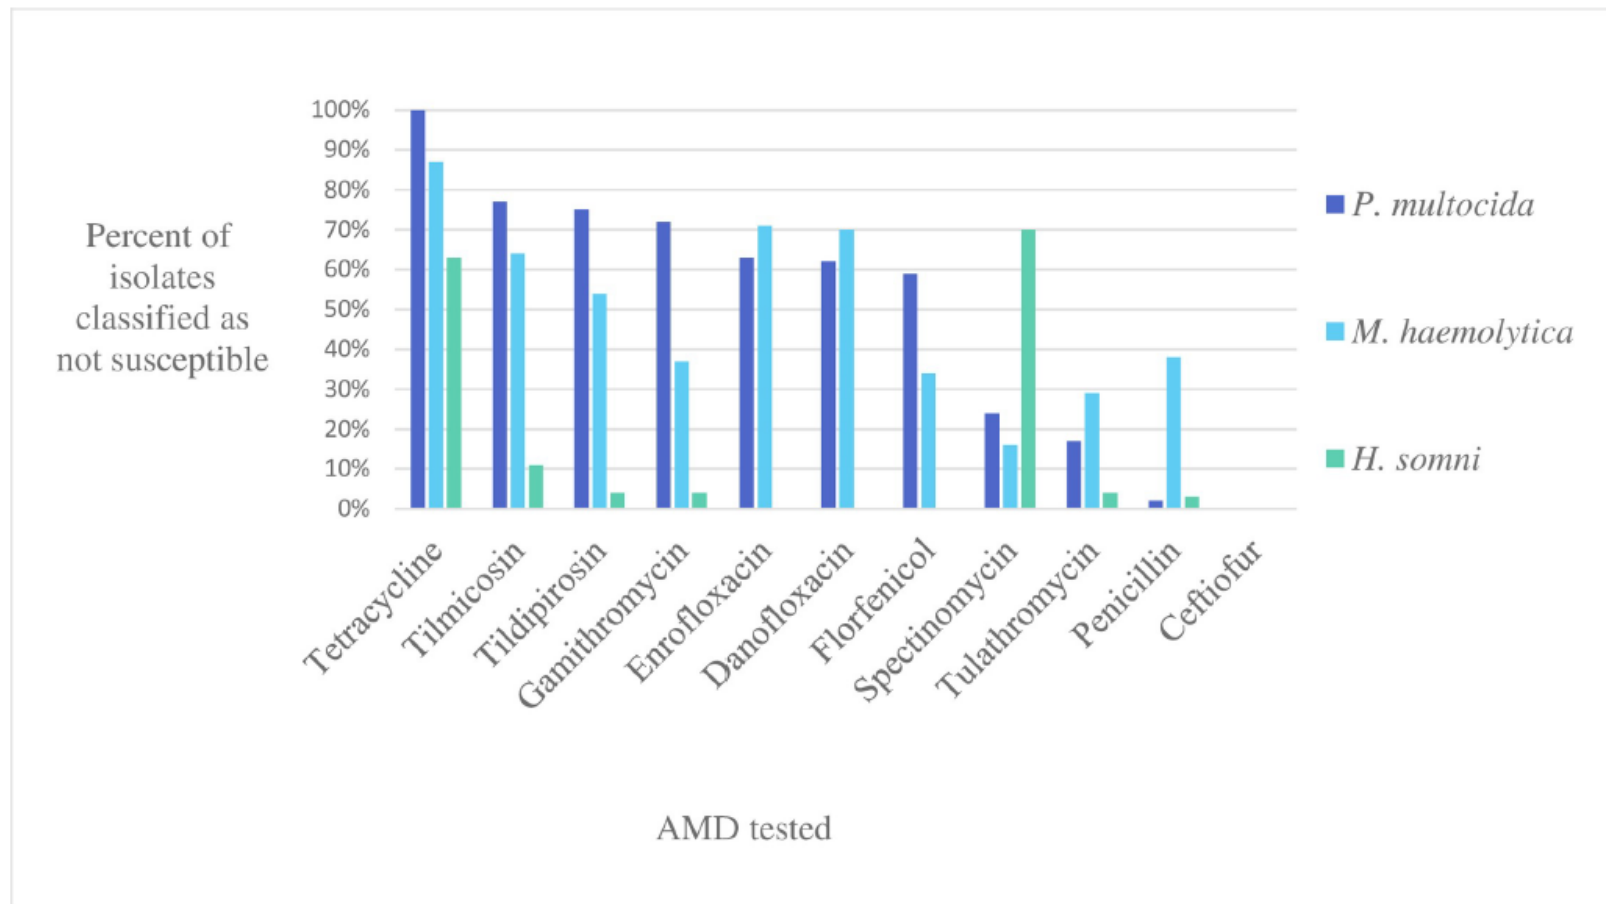

Fig 1. Percent of respiratory isolates classified by CLSI breakpoints as not susceptible (resistant or intermediate) to 11 antimicrobial drugs tested by broth microdilution method. *P. multocida* (n = 145), *M. haemolytica* (n = 119), *H. somni* (n = 97). AMD = antimicrobial drug.

Research & CAHFS

- Research studies
 - Both AMU & AMR in multiple species / prod'n classes
 - Stewardship projects to develop outreach

Total AUS Funds Spent by:	\$'s	%
Cattle	\$ 3,673,213.91	36%
Non Cattle	\$ 3,231,793.25	32%
CAHFS	\$ 3,207,548.66	32%
Sub Totals	\$ 10,112,555.82	
Non UC \$s	\$ 1,819,269.78	18%
UC \$s	\$ 8,293,286.04	82%
Totals	\$ 10,112,555.82	

- Topics relevant to cattle have included
 - *Salmonella* Dublin
 - mastitis
 - BRD
 - fecal *E. coli*

AUS ACHIEVEMENTS SINCE PROGRAM INCEPTION

through June 30, 2023

Awarded over **\$6,100,000**
to support AUS-focused research

Nearly **\$2,600,000** to
fund antimicrobial susceptibility
testing capacities at CAHFS

Over **8,430** bacterial isolates
tested in AUS-funded projects

Over **23** peer-reviewed papers
published on AUS-funded research

Over **2,530** producers and
farms engaged

Over **3,270** attendees reached

June 2023: FDA follows
California in bringing MIADs under
veterinary oversight nationally

AUS mandates under the law

- Coordinate, don't duplicate ✓
- Develop a **surveillance** (monitoring) program to collect data on:

Use of medically important antimicrobial drugs (MIADs) ✓

Animal management practices and health outcomes ✓

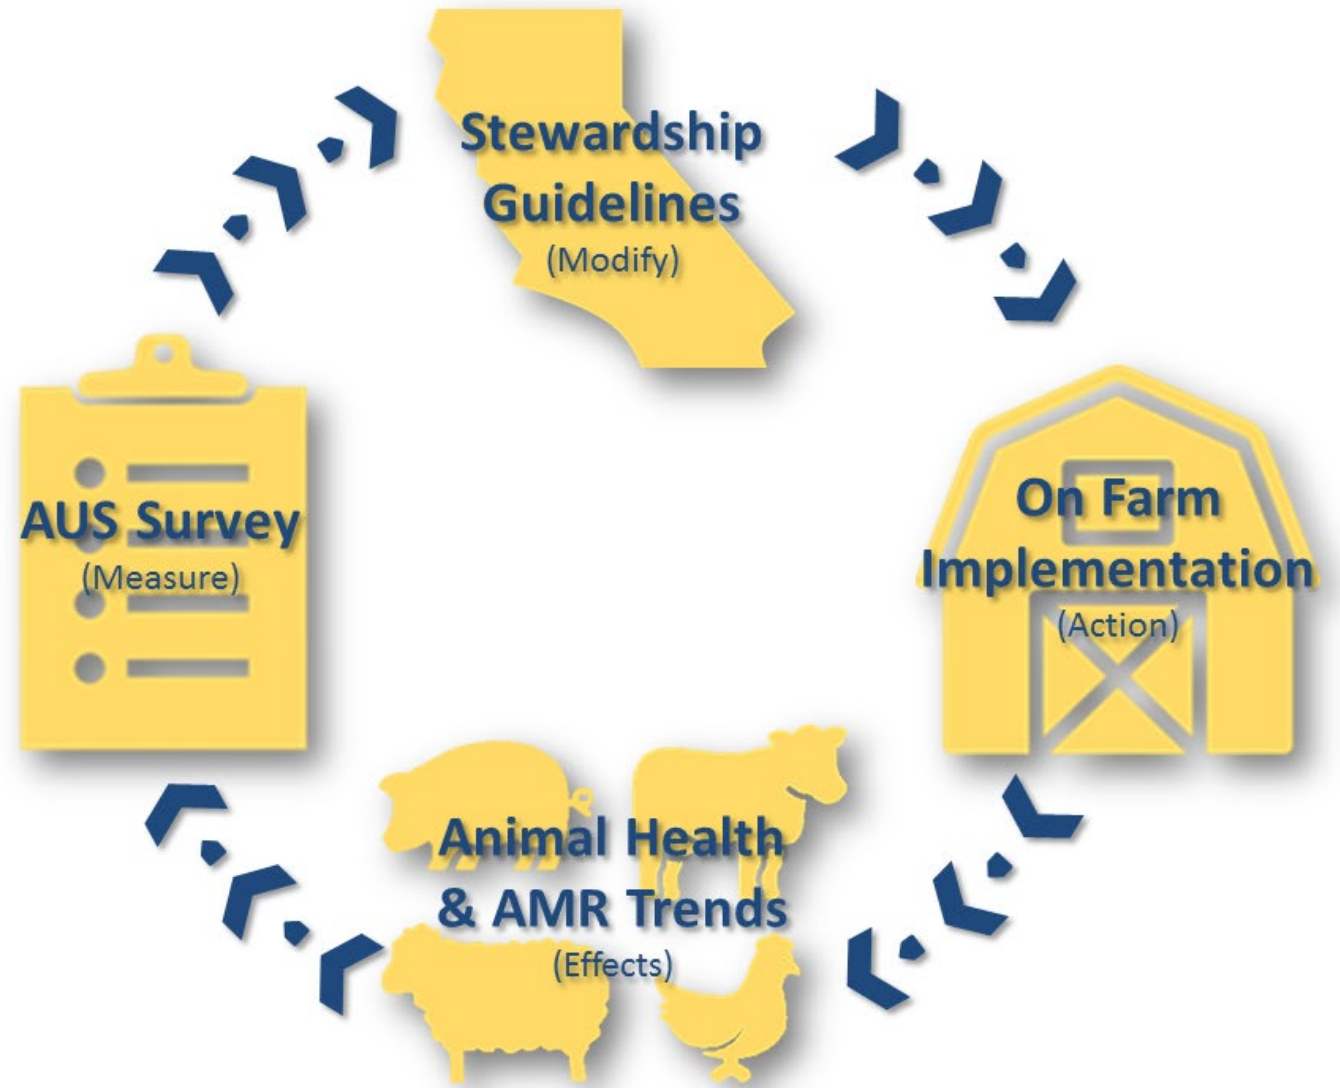

Trends in antimicrobial resistance ✓

Sales of medically important antimicrobial drugs ✓

- Develop a **stewardship** program and outreach/educational materials based on scientifically validated information

How is AUS fulfilling the law?

How data becomes guidance...

Cow Calf Pinkeye: Strategies for Management

References: Sheedy et al. 10.1016/j.animal.2021.10024

Also known as bovine keratoconjunctivitis (IBK)

Signs:

- Tearing
- Closed or squinted eye
- Reddening of the white part of the eye
- Eye ulcers

Possible consequences:

- Slower rate of weight gain due to pain
- Production loss
- Cost of treatment

GENERAL STRATEGY

Consider the logistics of management and the costs of treating pinkeye (expense, labor) while making a strategic plan with your veterinarian for reducing pinkeye in your herd

RISK FACTORS

Age

Calves are affected more often than older cattle

Breed

Hereford cattle are more at risk due to lack of pigment around their eyes

Season

Warm months and increased sunlight favor infection

Flies

Face flies increase the risk of pinkeye

Beef Cattle Scours: Strategies for Management

Visual description of fecal consistency score. A score of ≥ 2 indicates the presence of diarrhea.

From: Renaud D.L. et al. Technical note: Is fecal consistency scoring an accurate measure of fecal dry matter in dairy calves? J Dairy Sci, 103 (11) 2020

0

normal

Firm but not hard

1

soft

Does not hold form, piles but spreads slightly

2

runny

Spreads readily

3

watery

Liquid consistency, splatters

Please note: Follow-up testing may be necessary to provide accurate pathogen

*bacteria, †viruses, ‡protozoa

	Typical age at onset (in days)	Clinical signs	Vaccine Availability	Notes
<i>E. coli</i> *	1-7	Causes fluid loss from diarrhea or fluid pooling in intestines	Vaccines are available for pregnant dams; oral antibodies are available for calves	Suspect when very young calves die suddenly. The most serious type of <i>E. coli</i> is enterotoxigenic <i>E. coli</i> (identified as FS/ K99).
<i>Cryptosporidium</i> ‡	5-30	Watery diarrhea, can see mucus, up to 7 days duration	No vaccines are available	Resistant to disinfectants; clean facilities with soap and water and expose to UV light
Coronavirus†	7-10	Severe diarrhea lasting 7-10 days; dehydration, weakness; may see blood in feces	Vaccines are available for pregnant dams and calves	High death rate if other pathogens are also involved
Rotavirus†	14-21	Non-bloody diarrhea lasting 4-8 days; calves may have a fever, be depressed, lie down	Vaccines are available for pregnant dams and calves	
<i>Salmonella</i> *	14-60	Diarrhea with fresh blood and mucus; may also see pneumonia or swollen joints	Vaccines are available but have not shown benefits in field trials. Anecdotally, vaccines for calves lead to improved outcomes.	Antibiotic resistance is common

NO LONGER NECESSARY

How to show these successes?

2019 Report to the Legislature

Antimicrobial Use and Stewardship (AUS) Program Report to the Legislature

- Not required by law
- Done because we value ***transparency*** and want the Legislature and our stakeholders (including you!) to know what we are doing and how we continue to implement the law
 - We do great work! And we want everyone to know about it!

 - Farm worker engagement in improving management practices
- Free, online farmworker training modules – NEW!

- H5N1 research, including transmission, milk acidification, wildlife, flies

HOW TO UTILIZE MIC RESULTS

Individual animal

Group of animals

MIC report

Antibiogram

Antibiogram: An analysis of cumulative antimicrobial susceptibility data specific to production group, pathogen, region and time period

Used to make treatment decisions specific to a particular animal

Isolates from **sick animals**

Isolates from presumed **healthy animals** or the **environment**

Antibiograms **should not** replace the need for culture & sensitivity as determined by clinical judgement.

Indicates resistance trends and may guide initial empiric therapy.

Used to demonstrate baseline resistance trends.

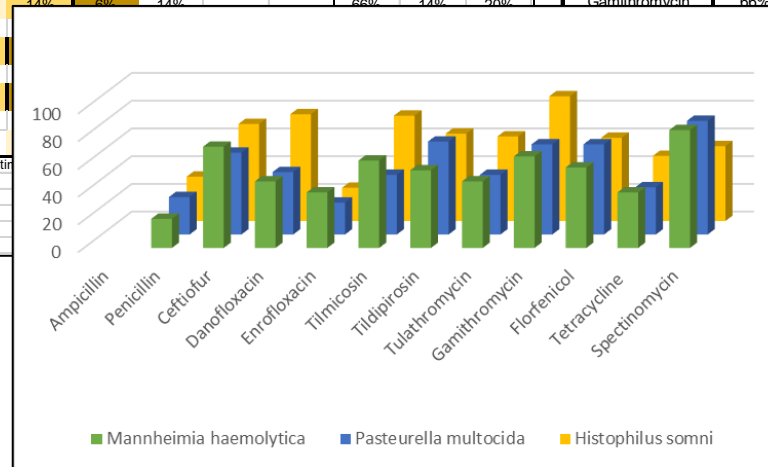

Examples of CAHFS antibiograms

Mannheimia haemolytica Respiratory Sites Cattle CAHFS Clinical Isolates July 1, 2020 - June 30, 2021																		
Antimicrobial	Breakpoints ^a			Percentage of isolates for each concentration of antimicrobial (ug/mL)												(N=97)
